

Project Monolog — Process & Logic Flow Specification

Message Ingestion, Role Authentication & Functional Workflows

1. Webhook Ingestion & Dual-Agent Role Determination

Step	Component	Technical Execution
1. Inbound Ingestion	FastAPI Webhook (/webhook)	Meta sends JSON payload with destination_phone (metadata) and sender_phone (from).
2. Tenant Resolution	business_whatsapp	Query SELECT business_id FROM business_whatsapp WHERE w_number = destination_phone. Discard if unmapped.
3. Role Gatekeeper	human_escalation	Compare sender_phone against human_escalation.man_number for resolved business_id. • MATCH: Route to Owner Agent Runner. • MISMATCH: Route to Customer Agent Runner.

2. Operational Agent Workflows

Customer Inquiry (Standard)	Execution Detail
1. Question	Customer inquires regarding trading hours, physical branches, catalog pricing, or lead times.
2. Zero-Temp Tools	Gemini calls scoped tools: get_business_overview, get_trading_hours, get_physical_location_and_service_area, get_products_or_services.
3. Fallback / Guard	If information is missing or unlisted, assistant invokes escalate_unanswered_query_to_owner and notifies management.

Lead Capture & Order Placement (Green Flow)	Execution Detail
1. Purchase Intent	Customer indicates desire to place an order, book a service, or proceed.
2. Data Harvesting	Assistant checks if Name, Surname, Email, Address, and desired Product are present. Politely prompts for missing fields.
3. Persistence	Calls submit_lead_and_order_request: upserts client_table (cust_*) and creates open_queries (qry_*) + query_items (item_*).
4. Dual Notification	Dispatches instant WhatsApp alert to business owner (man_number) and confirms receipt to customer with 24h turnaround guarantee.

Owner Reminders & To-Do List (Orange Flow)	Execution Detail
1. Create Task	Owner messages requesting a reminder or to-do entry. Gemini invokes add_reminder to insert record into reminder_table.
2. Confirmation	Assistant returns confirmation with generated reminder ID (rem_*).
3. Fetch Reminders	Owner asks to view active reminders. Assistant invokes list_reminders and renders formatted list.

Owner Scheduling & Agenda (Red Flow)	Execution Detail
1. Set Appointment	Owner sends appointment parameters. Gemini validates required fields (subject, date, time, location), requesting missing details.
2. Conflict Check	Tool checks scheduler for overlapping appointments at the requested date and time. Blocks overlap if present.
3. Agenda Review	Owner requests schedule for day/week. Assistant queries scheduler filtered by ISO dates and returns ordered schedule.

Owner Query Management	Execution Detail
1. Inquire Queries	Owner requests pending queries. Assistant executes list_open_queries and returns full lead details.
2. Update Status	Owner requests update to a query (e.g., IN_PROGRESS, RESOLVED, CLOSED). Assistant executes update_query_status.
